

## Using Argon TT2 USB with Windows 10

When connected, the Argon TT2 USB will be detected by Windows 10 as a Microphone. The default settings in Windows 10 will cause it to record audio from the TT2 USB in mono. To get stereo recordings, please make this simple adjustment before you start transferring your records.

**Step 1:** Connect the USB-turtable to your computer and wait for the automatic driver installation to finish. When the installation has finished, right click the speaker icon in the taskbar and select *Playback devices*.

**Step 2:** Select the turntable (its name will be Microphone – USB Audio Device) and click *Properties*.

**Step 3:** Click *Advanced* and choose *2 channel, 16 bit, 48000 Hz (DVD Quality)* from the dropdown menu.
